## Code Built Locally

When building on a different architecture, everything could stop working

## Continuous Integration

By creating the build as code we made builds it easier to share code

## Continuous Deployment

Deciding that deployments caused a lot of stress, we made them code too

## Infrastructure as Code

Environments we deploy to are now easily repeatable and more shareable

## Dev Environment (design) as Code

You are Here

# Choose an environment manager for Ruby

# What does a Dev Container do?

**Automate the  
creation of your  
dev environment**

**Immediate,  
effortless  
onboarding to  
any project**

**Consistent,  
ephemeral  
development  
environments**

**Development  
Environment  
(Design :) ) as  
Code**

# Start Local

# When can I use Dev Containers?

**The dev environment is linux-based**

**Not for**

- Native Mobile
- Windows UI

**A place where someone can maintain the dev environment**

**Locally or Remotely**
